### **Climatronics' TACMET II Targets HazMat/Homeland Security Portable Weather Station Requirements**

BOHEMIA, NY (May 24, 2005) Climatronics Corporation now offers a version of its successful TACMET II Weather Station specifically configured and packaged for HazMat and Homeland Security real-time weather data requirements.

TACMET II is a rapidly deployable, compact, self-contained portable weather station packaged in two rugged cases. Commonly available AC or DC power sources power the system - minimal power is required. Real time data can be displayed on a laptop or PDA, and analyzed using our WeatherView™, AWeather™, or NOAA's CAMEO/ALOHA software products. Data are transmitted either via wire or wirelessly via an internal spread spectrum radio. TACMET II can be vehicle mounted on a Mobile Command Center Vehicle.

Typical applications include HazMat emergency response, individual facility security and emergency response management, forest fire or controlled burning management, special event security, and temporary local aviation support.

Climatronics is a leading manufacturer of weather sensors and systems specializing in turn-key system integration and custom application. We supply and service our equipment worldwide and maintain a complete factory calibration facility.
